

Aqualog

reference fish of the world

Killifishes of the World **Old World Killis II**

Aplocheilus
Epiplatys
Nothobranchius

Dr. Lothar Seegers

Regenzeit / rainy season

Trockenzeit / dry season

Der Lebenszyklus der Saisonfische am Beispiel der Gattung *Nothobranchius*.
 The life cycle of seasonal fishes as, for example, in the genus *Nothobranchius*.

Erklärungen der Abkürzungen in den wissenschaftlichen Namen

Key to the abbreviations of the scientific names

Beispiel/ example:	<i>Epiplatys</i>	<i>dageti</i>	<i>monroviae</i>	DAGET & ARNOULT,	1964
	Gattung	Art	Unterart	Beschreiber	Publikationsjahr
	Genus	Species	Subspecies	Describer	Year of publication

sp./spec.: = species (lat.): Art/species
 Hinter einem Gattungsnamen meint dies: Ein Artnamen steht (noch) nicht zur Verfügung, die Art ist bislang nicht eindeutig bestimmt bzw. noch nicht formell beschrieben/
 Following the genus name, this means: A species name is not yet available, the species has not yet been determined or formally described.

ssp.: = subspecies (lat.): Unterart/subspecies
 Einige Arten haben ein sehr großes Verbreitungsgebiet; innerhalb dieses Gebietes gibt es Populationen, die sich äußerlich zwar deutlich von anderen Populationen unterscheiden, genetisch jedoch zur gleichen Art gehören. Solche Populationen erhalten als Unterart einen wissenschaftlichen Namen. Ist die Unterart bislang unbenannt, so steht hier nur ssp./
 Some species inhabit an area of a very wide range; within this area, there may be populations which differ significantly in appearance from other populations, but clearly belong to the same species. Such populations may get a third scientific name, indicating a subspecies. If a subspecies name has not yet been formally given, the abbreviation ssp. is added.

cf.: = confer (lat.): vergleiche/compare
 Einem Artnamen vorangestellt meint dies: Das vorliegende Exemplar oder die entsprechende Population weicht in gewissen Details von der typischen Form ab, jedoch nicht so gravierend, daß es oder sie einer anderen Art zugeordnet werden könnte./
 Placed in front of a species name this means: The specimen shown or the respective population to which it belongs differ in some minor details from the typical form, but these differences do not justify to place it into a species of its own.

sp. aff.: = species affinis (lat.): ... ähnliche Art/similar to ...
 Einem Artnamen vorangestellt meint dies: Die vorliegende Art ist bisher noch nicht bestimmt, sie ähnelt jedoch der genannten und bereits beschriebenen Art./
 Placed in front of a species name, this means: The species at hand is not yet determined but it is very similar to the one named in the following.

Hybride/hybrid: Kreuzungsprodukt, Mischling zweier Arten/hybrid or crossbreed of two species

In den beiden Bänden "Old World Killis" I und II als Synonyme behandelte Namen Names, treated as synonyms in both volumes of 'Old World Killis' I and II

Anhand der nachstehend aufgeführten Liste soll es dem Aquarianer erleichtert werden, in der Literatur unter anderen als den hier aufgelisteten Namen erscheinende Arten aufzufinden. Die linke Spalte beinhaltet den zu suchenden Namen einer Unterart, Art oder Gattung, rechts findet sich der hier verwendete Name. Diese Liste erhebt keineswegs Anspruch auf Vollständigkeit, ältere und gesicherte Synonyme sind in der Liste nicht aufgeführt. Siehe hierzu z.B. SEEGER, 1986, 1988.

The following list was compiled in order to help hobbyists to find species that might have different names in aquatic literature. The left column contains names of the subspecies, species, or genus you are looking for, the right column contains the corresponding names used in this book. This list does not claim to be complete, older and certain synonyms are not included (for further information, please see SEEGER, 1986, 1988).

azureus, <i>Epiplatys</i>	<i>Epiplatys olbrechtsi</i> "RL 56"
<i>Aphyosemion abacinum</i>	<i>Diapteron abacinum</i>

<i>Roloffia</i>	von der Nomenklaturkommission verworfenen Name, die Arten sind hier bis zu einer Gattungsrevision vorläufig in <i>Aphyosemion</i> eingeordnet / This name has been suppressed by the Commission of Nomenclature, the species of this genus are included here provisionally in <i>Aphyosemion</i> .
<i>Roloffia banforensis</i>	<i>Aphyosemion guignardi</i>
<i>santaisabellae, Aphyosemion</i>	<i>Aphyosemion oeseri</i>
<i>schalleri, Aplocheilichthys</i>	<i>Aplocheilichthys hutereaui</i>
<i>schwoiseri, Aphyosemion</i>	<i>Aphyosemion fallax</i>
<i>simulans, Aphyosemion</i>	<i>Aphyosemion escherichi</i>

Anmerkungen zum Bildteil:

Die Legenden zu den Bildern enthalten die folgenden Angaben:

- Die AQUALOG-Code-Nummer der Art, gefolgt vom vollständigen wissenschaftlichen Namen. Seine Bedeutung ist auf Seite 2 erläutert.
- Den deutschen / den englischen populären Namen, soweit vorhanden.
- "ABC 97/1" kennzeichnet den Fundortcode eines Sammlers. Dieser Fundort ist nicht selten in verschiedener Literatur (z.B. DKG-Journal), insbesondere aber in LANGTON (1996) aufgeschlüsselt, oft aber auch (noch) unbekannt. In jedem Fall sollte eine solche Fundortpopulation aber unbedingt rein erhalten und rein weitergezüchtet werden, denn sonst geht in der Aquaristik die Vielfalt der Fundortpopulationen verloren und es bleibt nach einigen Jahren eine Einheitsform einer Art übrig, die mit den Ausgangspopulationen, wie sie in der Natur vorgefunden werden, nicht mehr viel gemein hat. Überdies hat sich hin und wieder gezeigt, daß zwei zunächst einer Art zugeordnete Fundortpopulationen sich später als getrennte Arten herausstellten.
- [T.] bedeutet: Diese Population stammt vom Typenfundort der Art.
- In der dritten Zeile sind die Fundorte der Population, soweit bekannt, angegeben. Hierzu gilt das oben Dargestellte:

Fundortpopulationen stets rein weiterzüchten, nie kreuzen !

- Die Kürzel in der dritten Zeile und die Bedeutungen der Piktogramme der vierten Zeile sind auf der vorderen inneren Umschlagklappe erläutert, ausgeklappt erlaubt sie einen unmittelbaren Vergleich.

Some notes concerning the tables:

The captions of the photos contain the following information:

- The Aqualog code-number of the species, followed by the complete scientific name of the species. It is explained in detail on page 2.
- The German / English common names as far as available.
- "ABC 97/1" designates the collecting code or collecting localities of the different collectors. Such codes are sometimes explained in various literature (as for example the DKG-Journal), but see especially Langton (1996). Some codes, however, are not yet published. In any case every population should be purely bred to avoid the loss of the variability of the different strains as they were found in the wild and to avoid the production of hybrids. There could be the danger that within some years the variability of a given species might vanish and then there would only be a type in the hobby which has only little similarity with the wild strain.
- [T.] means: This population originates from the type locality of the species.
- The collecting localities of the respective populations, as far as known, are given in the third line. Please remember:

Do never interbreed specimens of different localities !

- The abbreviations and ideograms of the third and fourth line are explained on the inside of the back cover, please, unfold it.

Aplocheilidae

Asiatische Arten

Photo: O. Roth

1. Sri Lanka, Bentota-Fluß südlich von Ittapan.
Vorkommen von *Aplocheilus dayi*.
2. Westküste von Malaysia, Kuala Terong.
Fundort von *Aplocheilus panchax*, Barben,
einem Prachtzergurami und Halb-
schnabelhechtlingen.
3. Sri Lanka, Anguruwatota, Kottawa Forest.
Reisfelder mit *Aplocheilus parvus* und *Pseud-
osphromenus cupanus*.

Photo: O. Roth

1. Sri Lanka, Bentota River south of Ittapan.
Habitat of *Aplocheilus dayi*.
2. Malaysian westcoast, Kuala Terong. Here
Aplocheilus panchax, barbs, a licorice gourami
and halfbeaks were collected.
3. Sri Lanka, Anguruwatota, Kottawa Forest.
Paddies with *Aplocheilus parvus* and *Pseud-
osphromenus cupanus*.

Nothobranchius janpapi WILDEKAMP, 1977 zeigen häufig ein von anderen Prachtgrundkärpflingen etwas abweichendes Laichverhalten. Hier ein Wildfangpaar der Population "TZ 97/57" vom unteren Rufiji in Tanzania . S.Photos: L. Seegers

Nothobranchius janpapi WILDEKAMP, 1977 may show a spawning behavior which is different from that of other *Nothobranchius* species. Here a wild caught pair of the population "TZ 97/57" from the lower Rufiji River in Tanzania is shown.

Das Männchen nähert sich dem Weibchen in der freien Wassersäule und versucht es von der Seite her mit den Flossen zu umgreifen.
The male approaches the female in the free water column and tries to embrace the partner with the dorsal and anal fins.

Häufig wird bereits im freien Wasser in der Paarungshaltung abgelaicht. Die Tiere erstarren und sinken langsam nach unten.
The pair already spawns frequently in the free water column. The paralyzed fish slowly sink down.

Wie bei anderen Arten wird die Afterflosse zur Tüte gefaltet. Während dies das Ei sonst tief in den Boden bringt, fällt es hier frei auf den Boden.
Like with other species the anal fin is folded to bring the egg deeply into the ground. But in this species the egg freely falls down.

Aber auch bei *Nothobranchius janpapi* kann das Paar - wie sonst in der Gattung üblich - am Boden ablaichen.
Nothobranchius janpapi, however, may also spawn as a bottom spawner as it is done by most species within the genus.

 Spawning pair of *Nothobranchius melanospilus* (PFEFFER, 1896) of the population "TZ 89/3".

5 Photos: L. Seegers

Ein Männchen (oben) nimmt Kontakt zu einem Weibchen auf.
 The male (top) approaches the female.

Das Weibchen sucht eine geeignete Ablaichstelle, wobei das Männchen ihm im Körperkontakt folgt.

Followed by the male the female looks for a suitable spawning site.
 The male keeps in contact with its partner.

Das Weibchen hält an einer geeigneten Stelle an und das Männchen schwimmt neben die Partnerin.

The female stops at a suitable place and the male swims to her side.

Das Männchen "umgreift" den Hinterleib des Weibchens mit Rücken- und Afterflosse, beide pressen sich gegen den Boden.

The male "embraces" the female by its dorsal and anal fins, both fish are pressed against the soil.

Das Ei und die Spermien werden in den Boden abgegeben und das Paar trennt sich mit einem Ruck.

Egg and sperms are spawned into the soil and both fish push off the bottom.

Símbolos

Teniendo en cuenta la enorme variedad de lenguas a nivel mundial, hemos decidido, intencionadamente, sustituir cualquier descripción textual detallada por símbolos internacionales. De esta forma se pueden obtener los datos más importantes, sobre las especies y su cuidado. Los símbolos sobre el cuidado siempre hacen referencia a las condiciones en acuario y no a las del país de origen o de los biotopos.

Continente de origen

Simplemente, fíjese en la letra que va delante del código numérico

A = África E = Europa N = Norte América
S = Latino América X = Asia/Australia

Edad

El último número del código siempre significa la edad del pez

- 1 = muy pequeño (alevin /juvenil pequeño)
- 2 = pequeño (juvenil/tamaño comercial)
- 3 = mediano (sub-adulto/buen tamaño comercial)
- 4 = grande (adulto/tamaño de cría)
- 5 = extra grande (adulto totalmente desarrollado)
- 6 = excepcionalmente grande (especimen de exposición)

Procedencia

W = salvaje B = criado en acuario
Z = forma de cría (variedad "artificial") X = híbrido

Tamaño

... cm = tamaño aproximado que el pez puede alcanzar de adulto.

Sexo

♂ macho ♀ hembra ♂♀ pareja

Temperatura

- <D> 18-22°C(64-72°F) (temperatura ambiente)
- > 22-25°C(72-77°F) (muchos de los peces tropicales)
- △ 24-29°C(75-85°F) (Discos etc.)
- ▽ 10-22°C(50-72°F) (agua fría/templada; p.e. Norte América/Europa)

Valor de pH

- P pH 6,5-7,2 Sin necesidades especiales (neutro)
- IP pH 5,8-6,5 prefiere agua blanda, ligeramente ácido
- IP pH 7,5-8,5 prefiere agua dura y alcalina

Iluminación

- ☉ brillante. Mucha luz/sol
- ☾ no demasiado intensa
- ☿ muy tenue

Alimentación

- ☺ omnívoros; alimento seco, sin necesidades especiales
- ☹ dieta especial; alimento vivo y congelado
- ☺ piscívoro; se alimenta de peces vivos
- ☺ herbívoro; necesita alimento vegetal

Nivel de natación

- ☑ aguas medias/todos los niveles
- ☑ capas superficiales/nadador de superficie
- ☑ capas inferiores/nadador de fondo

Decoración del acuario

- ☑ Sólo rocas y el sustrato
- ☑ Rocas y raíces, cuevas
- ☑ Acuario plantado con rocas y raíces

Comportamiento/Reproducción

- ☑ mantener en parejas o tríos
- ☑ Pez de cardumen, no mantener menos de 10 ejemplares
- ☑ Oviparo
- ☑ Viviparo
- ☑ Incubador bucal
- ☑ criador en cuevas
- ☑ Constructor de nidos de burbujas
- ☑ comedor de algas/limpiacristales (raíces + alimento vegetal)
- ☑ pez no agresivo, fácil de mantener (acuario comunitario)
- ☑ difícil de mantener, leer previamente literatura especializada
- ☑ cuidado, extremadamente difícil, solo para especialistas experimentados
- ⊖ los huevos necesitan cuidados específicos
- ⊖ especies protegidas (WA), se necesitan permisos especiales ("CITES")
- ~L~ anfibios (necesitan zona de tierra)
- <BW> agua salobre (añadir sal al agua)
- ~SW~ marino (vive en el mar)
- <~SW~ juvenil en el mar (después tanto en agua salobre como en agua dulce
- ~SW~> juvenil en agua dulce (después en el mar)
- <~SW~> tanto en el mar como en agua dulce (cambial)

Tamaño mínimo de acuario

☑ super pequeño	20-40 cm	5-20 l
☑ pequeño	40-80 cm	40-80 l
☑ mediano	60-100 cm	80-200 l
☑ grande	100-200 cm	200-400 l
☑ XL	200-400 cm	400-3 000 l
☑ XXL	más de 400 cm	más de 3 000 l

(Acuarios de exposición)

Old World Killis II

Aplocheilus, Epiplatys, Nothobranchius

Auch dieser zweite Band aus der AQUALOG-Reihe ergänzbarer Bildlexika, die sich mit den Killifischen befaßt, behandelt die Killifische der Alten Welt. Waren es im ersten Band die Reiskärpflinge, Leuchtaugenfische und Prachtkärpflinge, die den inhaltlichen Schwerpunkt bildeten, so sind es in diesem Band die nicht minder farbenprächtigen Hechtlinge, Prachtgrundkärpflinge und die europäischen Kärpflinge.

Insgesamt werden in "Old World Killis II" alle wissenschaftlich bekannten Arten der Gattungen *Aplocheilus*, *Aphyoplatys*, *Diapteron*, *Epiplatys*, *Episemion*, *Foerschichthys*, *Fundulosoma*, *Nothobranchius*, *Pachypanchax*, *Paranothobranchius*, *Pronothobranchius*, *Aphanius* und *Valencia* gezeigt. Hinzu kommen alle Fundortvarianten, Farbvarianten und Zuchtformen, sowie zahlreiche bislang noch nicht bestimmte Arten. Eine neuentdeckte *Nothobranchius*-Art wird in diesem Buch erstmals wissenschaftlich beschrieben und abgebildet. Insgesamt enthält dieses AQUALOG Bildlexikon 557 farbige Abbildungen.

Dem Leser steht jetzt erstmals in der Geschichte der Aquaristik ein kompaktes Bestimmungswerk zur Verfügung, in dem alle bisher lebend bekannten Killifische der Alten Welt in farbigen Fotografien anerkannter Bildautoren vorgestellt werden.

Neu eingeführte oder neu entdeckte Arten und Varianten erscheinen als Einlebbilder (Stickups) in der AQUALOGnews, der einzigen internationalen Zeitung für Aquarianer, so daß Ihr AQUALOG immer up-to-date bleibt.

Die leicht verständlichen Symbol-Texte zu jedem der über 550 Farbfotos geben einen guten Überblick über Herkunft, Größe, Pflegebedingungen und sonstige Eigenschaften der jeweils gezeigten Art.

This second volume of the AQUALOG-series on Killifishes is, like the first volume, on Killis from the Old World. The first volume is focused on Lampeyes, Ricefishes and Aphyosemions - the second book presents the just as beautiful Panchax, Nothobranchs and European Killis.

"Old World Killis II" shows all scientifically known species of the genera Aplocheilus, Aphyoplatys, Diapteron, Epiplatys, Episemion, Foerschichthys, Fundulosoma, Nothobranchius, Pachypanchax, Paranothobranchius, Pronothobranchius, Aphanius and Valencia. Additionally, all colour varieties, breeding forms and locality varieties are included, plus several previously unknown species. On top of that, this AQUALOG book introduces a scientific premiere - a newly discovered Nothobranchius species is scientifically described and shown for the first time.

Altogether, AQUALOG - Old World Killis II presents 557 colour photographs.

For the first time in the history of the hobby, enthusiasts have a compact reference book at their disposal, a book that shows all known Killifishes in multi-coloured high-quality pictures made by renowned photographers.

Newly discovered or imported species and varieties will be published as supplementary stickers ('Stickups') in AQUALOGnews, the only international newspaper for hobbyists. This way, readers can keep their AQUALOG books always up-to-date. The easily understandable symbol-text captions provide detailed information on origin, size, care instructions and other important characteristics of each featured species.
